Info Security experts Coolcat Inc. selects DigiLIBE information management system

ST. PAUL, Minn., June 15, 2010 – [Digitiliti, Inc.](#) (OTC: DIGI), the leader in Operational Business Intelligence for small to mid-sized enterprises, today announced [Coolcat Inc.](#), a leader in content and network security for government and the private sector, has implemented Digitiliti's [DigiLIBE™](#) Virtual Corporate Library, a comprehensive solution for managing, controlling and accessing unstructured data.

Coolcat performs controlled hacking exercises and penetration testing against wired and wireless networks and application environments. This exercise often uncovers openings and flaws that were thought to be secure. With such a high priority placed on information security, and government and enterprise clients, Coolcat cannot tolerate data protection and archive systems that do not meet extremely high standards.

"DigiLIBE is a smart replacement for a hodgepodge of information management products, all with their own inherent vulnerabilities," said Seth Oxhandler, Coolcat's CEO. "A single architecture incorporates data storage, archiving, backup, compliance and more, so it supports our requirements for data security and access. We look forward to going the distance with DigiLIBE as our needs increase."

"Coolcat has a reputation for using the industry's best tools for their managed services clients, and we're happy to have their vote of confidence when it comes to managing their own data," said Ken Peters, Executive Vice President of Digitiliti. "Despite Coolcat's position in the industry, they are not unlike other DigiLIBE users facing problems of data growth, data proliferation, and out-of-control email."

Coolcat has seen annual revenues increase 20 to 45 percent over the years, and data growth along with it. With this wealth of business content, such as its customer knowledge base, competitive and industry landscape, employee/human resources, product and vendor information, Coolcat can leverage DigiLIBE to capture and mine this operational intelligence.

“We’ve been impressed so far with Digitiliti’s approach to ‘content in context,’ meaning information is an asset to be leveraged rather than an expense to be managed,” said Oxhandler. “This tracks with the kinds of services we provide to our customers, which is all about helping them operate as efficiently and intelligently as possible.”

DigiLibe solves fundamental problems associated with managing, controlling and quickly accessing unstructured data. DigiLIBE is a simple, integrated Virtual Corporate Library (VCL) system with policy-based applications to protect, control and secure data from its point of origin to final disposition. DigiLIBE addresses information growth across all points of the organization including office files, email, images, primary, secondary, offsite, and active archives. As a single architecture comprised of three simple components – information director, archive information store, and client agents – DigiLIBE reduces the number of disparate IT products needed, and the complexity and costs involved with managing and supporting information growth.

About Coolcat Inc.

Coolcat offers a wide range of services from flat-fee help desk to auditing. Its advanced security team focuses on forensics, ethical hacking, application, perimeter and penetration security testing. The team has performed hundreds of investigations and thousands of ethical hacking exercises and has experience ranging from corporate information security to federal and local law enforcement. As a Managed Service Provider, Coolcat delivers enterprise-class services at a flat per-node fee, unlimited help desk, network monitoring and managed solutions with flexible options to keep clients up and running; quickly and efficiently. Coolcat provides application hosting, email, messaging, antivirus, anti-spam, virtualization, SavService, network security, network monitoring, network management, two-factor authentication, content security, content distribution, offsite backup, disaster recovery hot sites co-location, and much more. Coolcat has offices in Florida, Washington D.C. and New York City and serves a client base in the U.S., Canada, Virgin Islands, Brazil and Europe (<http://www.coolcatinc.com>).
